

Savannah Tip No 24:

There is a strong possibility of the Centre Stick being jammed by an object that has fallen onto the floor of any model Savannah.

An example is as shown in the photo below where a fallen mobile phone is jammed under the stick.

ICP has made a very nice cover to prevent this possible jam occurring, as well as providing the additional benefit of minimizing the strong draught that otherwise sucks up the tunnel and into the cabin. Picture below. These **Leather over Aluminium** covers are available from AeroKits at A\$150 incl GST with rivets.
