Savannah Tip No 17:

Those of you who have early model Savannah's may not have been supplied with 4 off AN3-8 bolts for bolting the side seat belt anchorages. The early kits only showed 4 off A5 rivets in each side anchorage whereas the later kits were supplied with bolts and the instruction book showed 2 off bolts in each side anchorage. You would be strongly advised to fit bolts to these anchorages as per the attached photo of a later model. The rivets alone are not sufficient to hold under heavy impact forces.
